

Using `npm` behind a proxy

`npm` stands for `Node Package Manager`, and is the default package manager for the JavaScript runtime environment `Node.js`.

To permanently set the configuration we can do this.

```
npm config set proxy http://proxy.company.com:8080
npm config set https-proxy http://proxy.company.com:8080
```

If you need to specify credentials, they can be passed in the url using the following syntax.

```
http://user_name:password@proxy.company.com:8080
```

To Redirect traffic to proxy.

```
npm --https-proxy=http://proxy.company.com:8080 -g install npmbox
npm --https-proxy=http://proxy.company.com:8080 -g install kafka-node
```
